User Manual

Nimbusly

What is Nimbusly?

Nimbusly is a weather forecast app designed for both Mac and iOS devices. It provides an engaging visual animation of the current weather conditions.

Additionally, it is thoughtfully designed to accommodate users who are visually impaired or blind, as the entire forecast is also delivered through spoken narration.

Select Location

Nimbusly automatically displays the weather for your current location. To enable this feature, you need to grant permission for the app to access your location. To quickly return to your current location, simply tap the location arrow at the top left of the app. If you want to view the weather forecast for a different location, just type the place name into the search field. Results will appear and can be selected.

Audible forecast

Nimbusly weather forecasts can be read aloud by the app. If you prefer not to use this feature, you can enable or disable it at the top of the app. You can also set the language there. By default, the app reads

the weather forecast in the local language of the location (if available). Alternatively, you can choose a preferred language, for example, if you do not understand the local language of a particular area.

Temperature settings

Nimbusly can display the weather in both Celsius and Fahrenheit. Choose the setting that best suits your preference once. Like all settings in Nimbusly, your preferences will be saved for the next time you use the app.

Helpdesk

Our [helpdesk](#) is available to assist you with any questions or suggestions for improvement. Unfortunately, we are unable to provide better weather, as that is beyond our control.
